

## Improved ELITE updater.. 22 June 2016

*"...to ensure reliable updating of the Elite using the increasingly wider range of processor types and motherboard chipsets, Win OS, etc. we have introduced a facility into the updater that allows a user to adjust the update data transfer rate from the installer to the Elite to better suit his particular PC.*

We provide 3 PC "Type" settings, selectable via a drop down menu:

### PC Type 1

For use the Slow/older type PCs. ... this sets a longer data transfer interval in the updater and better suits older, slower PCs. e.g. Windows XP. Intel Core2 Processors etc? Maybe Older Laptops?

### PC Type 2

For use "Typical" PCs ... this sets a midrange interval in the updater to suit most PCs up to a couple of years old. (2016) i.e. typical office PCs etc. e.g. Windows 7/8. Possibly, Intel I3 type processors.

### PC Type 3

For use Faster PCs) ... this sets a shorter interval in the updater better suited to more modern faster PCs. Windows 7/8/10. Possibly, Intel I5/I7 processors and faster.

We suggest you use Type 2 initially and if this takes a long time to complete or it fails, try Type 1 (which maybe better suited to an older PC.) Use Type 3 on a faster machine.

Note that if you try too high a Type setting for your machine the update will usually work but it may take a long time to complete, this dependent upon your particular PC. You are also recommended to make a note of the Type best suited to your machine in case of future updates.'

It is noted that PC technology advances very quickly.. The PC "types" above relate to the date of release of the "new updater".. However, the different "types" selectable should suffice for the foreseeable future... i.e. if you can't get the update to work with one "type" we suggest you try another. If all fails contact Hornby Customer Support.

The "new" updater will be applied to all future ELITE updates.
